CATALOGUE
OF THE
SPECIMENS OF AMPHIBIA
IN
THE COLLECTION
OF THE
BRITISH MUSEUM.

J. E. Gray

30

PART II.
BATRACHIA GRADIENTIA, ETC.

PRINTED BY ORDER OF THE TRUSTEES.
LONDON: 1850.

LONDON:
SPOTTISWOODES and SHAW,
New-street-Square.

P R E F A C E.

THE first part of this Catalogue, containing the Toads and Frogs, or Tailless Batrachians, will shortly follow ; but so many additional specimens of these animals have been received in the Museum since the MS. was put into type, that it is considered advisable to defer its appearance until they can be examined, and the new ones described.

The part now printed contains the Tailed Amphibia, or Salamanders, Newts, and Sirens.

MM. Duméril and Bibron have not yet described the specimens of these families, and the death of M. Bibron, it is to be feared, has indefinitely deferred the appearance of the remainder of their work.

J. E. GRAY.

British Museum,
June 1. 1850.

SYSTEMATIC INDEX.

The names in italic are desiderata in the Museum Collection.

	Page		Page
ORDER I. BATRACHIA.		Xiphonura Jeffersoniana	34
SUBORDER I. SALIENTIA.		Ambystoma Carolinæ	35
(See Part I.)		<i>tigrinum</i>	35
SUBORDER II. GRADIENTIA.		<i>talpoideum</i>	36
Fam. I. SALAMANDRIDÆ.		<i>opacum</i>	36
Salamandra nigra	16	<i>punctulatum</i>	37
<i>maculosa</i>	16	<i>macrodactylum</i>	37

CATALOGUE OF AMPHIBIA.

CLASS IV. AMPHIBIA.

Animal furnished with a distinct bony skeleton.

Skin naked, and without any bony case; very rarely with very small embedded scales.

Body variable in form.

Skull with two occipital condyles.

Head without any distinct neck.

Toes (almost always) without claws.

Ribs none, or short. Sternum often distinct.

Male without any prominent generative organs.

Respiring by cellular lungs, and often by external gills, which generally fall off as the animal reaches adult age.

Eggs with a soft shell.

Young subject to a metamorphosis.

Amphibia, Reptiles, seu A. Reptilia (partim), *Linn. Syst. Nat.* ed. 12. i. 3.

Sebæ (seu Amphibia) Reptilia (part.) *Scovoli, Introd. H. N.* 460. 1777.

Batrachia *Tschudi, Batrach.* 1838.

Batraciens *Brongniart, Bull. Soc. Philom.* 1799; *Duméril, Zool. Anal.* 1806.

Batrachia (and Ophidia part.) *Rafin. Annal. Nat.* 74. 1815.

Les Batraciens (et Serpents nus) *Cuvier, Règ. Anim.* ii. 88. ed. 2. ii. 101.

Reptilia Batrachia *Oppel. Rept.* 1811.

Amphibiens *Blainv. Org. Anim.* i. tab. 5. 1822.

Batrachia, Reptiles Ictyoides ou Nudipellifères *Blainv. Bul. Soc. Philom.* 1816, 119.

Amphibia Batrachii *Cuv.; Eichwald, Zool. Spec.* iii. 163.

Dipnoa *Leuck.; Fitz. Nat. N. Class.* 63. 1826, *Syst. Rept.* 1843.

Dipnoa, or Diplnoa, Batrachia *Bonap. Amph. Eur.* 10. 1839; *Mem. Acad. Sci. Torino*, ii. 1839.

Synopsis of Orders.

A. *Nostrils enclosed in a bony case ; the internal nostrils opening into the middle of the palate.*—TRITONES.

Order I. BATRACHIA.

Gill well developed, vanishing in adult age. Adult with four limbs.

Order II. PSEUDOSAURIA.

Gill rudimentary or internal. Body with four legs.

Order III. PSEUDOPHIDIA.

Gill rudimentary or internal. Body cylindrical. Legs none.

B. *Nostrils not enclosed in a bony case ; the internal nostrils opening between the lips and the bones of the palate.*—SIRENES.

Order IV. PSEUDOICHTHYAS.

Gill internal. External skin scaly.

Order V. MEANTIA.

Gill well developed, retained throughout life. Skin naked.

Or they may be divided according to the structure of the skull, and arranged thus :

Subclass I. *LACERTINI*.—Skull formed of separate bones. Gills of the young (and, rarely, of the adult animal) well developed and exposed. Skin naked.

Order V. MEANTIA.

Gill permanent. Internal nostrils in inner edge of lip.

Order I. BATRACHIA.

Gill deciduous. Nostrils in a bony case, internal nostril in palate.

Subclass II. *ICHTHYODI*.—Skull solid, the bones united together. Gills enclosed under skin, often early deciduous. Neck with brachial holes. Skin with embedded scales. Body elongate, tailed.

Order II. PSEUDOSAURIA.

Internal nostril in palate. Body depressed. Legs four. Scales minute, embedded.

Order III. PSEUDOPHIDIA.

Internal nostrils in palate. Body subcylindrical. Legs none. Scales minute, embedded.

Order IV. PSEUDOICHTHYAS.

Internal nostrils in the inner edge of upper lip. Body compressed. Legs four, rudimentary. Scales large.

A. TRITONES. — *The nostrils enclosed in a bony case ; the internal nostrils opening on the sides of the middle of the palate.*

ORDER I. BATRACHIA.

Skull formed of separate bones.

Nostrils enclosed in a bony case ; the internal nostrils opening on the sides of the middle of the palate.

Gills of the young (and rarely of the adult animals) well developed and exposed.

Skin naked, smooth.

Body of young elongate.

Tail often deciduous.

Legs four, rarely only two.

Batraciens *Brongniart*, *Bull. Soc. Philom.* 1799 ; *Duméril*, *Zool. Anal.* 1806.

Batrachia *Rafin. Anal. Nat.* 74. 1815.

Batrachia and Hemibatrachia *Fitz. Syst. Rept.* 30. 33.

Amphibia Caducibranches *Latr. Fam. Nat.* 1823.

Divide into two Suborders thus : —

Suborder I. SALIENTIA.

Body short, depressed, without any tail.

Suborder II. GRADIENTIA.

Body elongate, tapering, tailed.

The details of the first Suborder are given in Part I.

EXPLANATION OF PLATES.

TABLE III.

- Fig. 10. Palatine surface of the skull of the larva of *Triton marmorata*, p. 20., from *Dugès, Batrach.* p. 157. t. 14. f. 89., and *Van der Hoeven*, t. 1. f. 1.
11. Palatine surface of the skull of the adult *Triton marmorata*, p. 20., from *Dugès*, l. c. p. 157. t. 14. f. 86.
12. Palatine surface of the skull of the *Axolotl*, from *Cuvier, Os. Fos.* v. t. 27. f. 25. p. 415.
13. Reduced figure of palatine surface of skull of *Cynops pyrrhogaster*, p. 25., from *Tschudi, Batr.* l. 2. f. 5. b., and *Sal. subcristata, Fauna Japon. Batr.* t. 5. f. 8.
14. Reduced figure of palatine surface of skull of *Molge striata*, p. 31., copied from *Sal. nævia, Fauna Japon. Batr.* t. 5. f. 10.
15. Reduced figure of palatine surface of skull of *Anychodactylus japonicus*, p. 33., copied from *Sal. unguiculata, Fauna Japon. Batr.* t. 5. f. 6.

TABLE IV.

- Fig. 16. Palatine surface of skull of *Proteus anguinus*, p. 65., copied from *Cuvier, Os. Fos.* v. t. 27. f. 15
17. Palatine surface of skull of *Siren lacertina*, p. 68., copied from *Cuvier, Os. Fos.* v. t. 27. f. 3.
18. Palatine surface of skull of *Protonopsis horrida*, p. 53., from *Van der Hoeven, Tijdschrift*, 1838, t. 1. f. 4.
19. Palatine surface of skull of *Cæcilia*, from *Dugès, Batr.* t. 14. f. 93. p. 161.
20. Palatine surface of skull of *Lepidosiren paradoxa*, p. 62., copied and reduced from *Ann. Sci. Nat. Zool.* xiv. t. 7. f. 6.
21. Palatine surface of head of *Muraenopsis tridactyla*, p. 55., copied from *Owen, Odont.* t. 62. f. 7. (part only).

Suborder II. *GRADIENTIA*.

Body elongate, tailed in all ages. Limbs four, weak, small, equal.

Gills well developed in the young, decaying as the animal arrives at full age, very rarely retained through life.

Teeth in both jaws, and often in the palate.

Ears hidden.

Internal nostrils in middle of palate, surrounded by bone.

Vent longitudinal.

Skin naked, smooth, or warty.

Sternum and *clavicule* none.

Ribs distinct or rudimentary.

Eggs elliptical, isolated, deposited separately at different periods, hatched in succession.

Larva elongate, conical, compressed behind. Gills exposed, on the side of the neck, over the three or four branchial slits. Fore and hind legs developed nearly at the same time. The gills are sometimes retained for a longer period, and are rarely even found withered on the side of the neck of the adult specimens.

Gradientia *Laur. Rept.* 1768.

Atretodères ou *Salamandroides* *Dum. & Bibr. Erp. Gen.* viii. 92.

Salamandridæ (partim) *Hogg, Ann. N. H.* 1839; *Bonap. Amph. Eur.* ii. 71.

Tritonia *Rafin. Annal. Nat.* 78. 1815.

Salamandridæ *Gray, Ann. Phil.* 1825, 215.

Rafinesque names, but does not describe, three genera in this suborder, viz. *PALMETES*, *LOPHINUS*, *MEINUS*.

Synopsis of Families.

- I. *SALAMANDRIDÆ*. Palate with teeth on the inner hinder edge of the elongate palatine bones, in two diverging series. Sphenoid toothless. t. 3. f. 11. 13.
- II. *MOLGIDÆ*. Palate with teeth on the outer hinder edge of the elongated palatine bones, in two converging series. Sphenoid toothless. t. 3. f. 14.
- III. *PLETHODONTIDÆ*. Palatine teeth in a short series across the hinder end of each short vomerine bone, forming a cross band behind each internal nostril, and the sphenoid often covered with teeth. t. 3. f. 15.

FAM. I. SALAMANDRIDÆ.

Palatine teeth in two longitudinal series; one on the inner hinder edge of each of the elongated triangular vomerine bones. Sphenoid toothless. t. 3. f. 11. 13.

Skull with a bony orbit above the eyes; sometimes wanting.

Tongue broad, attached only slightly, free on the sides, and more or less behind.

Ribs rarely developed and mobile; generally rudimentary, immovable, or entirely wanting.

Salamandridæ *Gray, Ann. Phil.* 1825, 215.

Cryptopleura (part.) *Fitz. S. R.* 33.

Elophile (part.) *Fitz. S. R.* 33.

Hydrophili *Fitz. S. R.* 33.

Salamandrinæ (part.) *Fitz. S. R.* 33.

Salamandræ (part.) *Tschudi, Batr.* t. ; *Fitz. S. R.* 33.

Salamandrina (part.) *Bonap. Fauna Ital.* ii. 131., *Amph. Eur.* 11.

Phæneropleura et Cryptopleura (part.) *Fitz. S. R.* 32.
 Pleurodeles *Tschudi, Batr.* 56. 91.; *Fitz. S. R.* 33.
 Pleurodelina *Bonap. Faun. Ital.* ii. 171., *Amph. Eur.*

Synopsis of Genera.

A. *Tongue moderate, attached; hinder and side edges scarcely free. Toes 4:5.*

a. *Palatine Teeth in two series, extending before the internal nostrils.*

1. SALAMANDRA. Back with a series of perforated warts. Parotids large, glandular.

2. PLEURODELES. Sides with a series of holes perforated by the ribs, and a line of pores between the axilla and the groin.

b. *Palatine teeth in two series, commencing on a line with the internal nostrils.*

3. TRITON. Granular. Sides with a series of pores between the axilla and the groin. Tongue oblong. Tail compressed. Parotids porous, distinct.

4. NOTOPHTHALMUS. Granular. Sides with a series of pores between axilla and groin. Tongue oblong. Tail compressed. Parotids none.

5. EUPROCTUS. Granular. Tongue rhombic. Vent with a conical protuberance. Tail compressed, round at the base.

6. CYNOPS. Granular. Sides not porous. Parotids large, compressed. Tail compressed.

7. TARICHA. Granular. Sides not porous. Parotids indistinct. Tail compressed.

8. BRADYBATES. Granular. Tongue very small. Tail round at the base.

9. LOPHINUS. Smooth. Sides poreless. Palatine teeth in two separate series. Orbit in palate small.

10. OMMATOTRITON. Smooth. Sides poreless. Palatine teeth in a crowded series. Orbit in palate very large, convex.

B. *Tongue large, hinder half free. Toes 4:4. Palatine teeth in two series.*

11. SEIRANOTA. Granular.

A. *Tongue moderate, attached; hinder and side edges scarcely free.*
Toes 4:5. — Salamandrina.

a. *The back with a series of pierced warts on each side.*

1. SALAMANDRA.

Head thick. *Eyes* large. *Mouth* large. *Tongue* broad, fixed in front, granular; hinder part and sides scarcely free. *Palatine teeth* in two separate longitudinal series, parallel behind, but rather wider apart and arched in front. *Parotids* large, glandular, flat-topped.—*Body* with two series of glands down the back and tail, each ending in a pore; lateral line simple, with a group of pores on each side.—*Feet* very minute.—*Toes* 4:5, free.—*Tail* roundish.—*Skin* smooth.—*Ribs* slightly developed, not movable.—*Females* viviparous.

Rusconi and Cuvier have observed that in the young animal the whole vomerine is covered with teeth. *Cuvier, Os. Foss.* v. 418.

Salamandra Laur. Rept. 41.; *Dum. Zool. Anal.* 95.; *Oppel. Rept.* 74. 80.; *Cuvier, R. A.* ii. 99. ed. 2. ii. 115.; *Merrem, Tent.* 184.; *Rafin. Annal. Nat.* 78. 1815; *Bonap. Fauna Ital.* ii. 131., *Amph. Eur.* 66.; *Tschudi, Batrach.* 56. 91.; *Fitz. S. R.* 23.; *Gray, Ann. Phil.* 1825, 215.

1. SALAMANDRA NIGRA. Black Salamander.

Black, spotless. *Skin* rugose, with papillæ; lateral warts very prominent. *Toes* depressed.

Salamandra atra Laur. Rept. 42. 149. t. 1. f. 2.; *Latr. Rept.* ii. 218.; *Daud. Rept.* viii. 215.; *Merrem, Tent.* 184.; *Bonap. Fauna Ital.* t. . f. 1.

Lacerta Salamandra β. Gmelin, S. N. i. 1067.

Lacerta atra Wolf, Sturm, Deutsch. Fauna, t.

a. In spirits. Styria. From Leyden Museum.

2. SALAMANDRA MACULOSA. Salamander.

Black, yellow-spotted; warts on the sides numerous, prominent.

Lacerta Salamandra Linn. Mus. Ad. Fred. 1. 45., *Syst. N.* 1371.; *Gmelin, S. N.* 1. 1067.; *Latr. Rept.* ii. 194.

Salamandra maculosa Laur. Rept. 42. 151.; *Gravenh.* ; *Wagler,* ; *Fitz.* ; *Bonap. Faun. Ital.* t. , *Amph. Eur.* 67.; *Fitz. S. R.* 33.

S. maculata Merrem, *Tent.* 185.; *Tschudi, Batr.* 91.

S. vulgaris Cloquet, *Dict. Sci. Nat.* xlvii. 50.

Salamandra terrestris Wurf. b.; *Ray, Syn.* 273.; *Daud. Rept.* viii. 221. t. 97. f. 1.; *Schlegel*, ; *Funke*, .

Salamandra *Gesner, Quad. ov.* 80 fig.

Salamandra Corsica Savi, *N. Giorn. Pisa*, 1839, 208.; *Bonap. Fauna Ital.* t. . f. ., *Amph. Eur.* 67. (with anomalous teeth.)

OSTEOL. *Cuvier, Os. Fos.* v. 406. t. 25. f. 1, 9. 10.

ANAT. *Dugès, Batrac.* t.

a. In spirits. Sardinia. Presented by Professor Bonelli.

b—d. In spirits. Europe.

e. In spirits. Black; back with two yellow streaks; belly with large yellow spots on each side. Portugal. Presented by P. B. Webb, Esq.

f. In spirits. Yellow; back with three broad black streaks. S. Europe. Portugal. Presented by P. B. Webb, Esq.

g. In spirits. Hungary. Black, with roundish yellow spots. Mr. Brandt's collection.

b. *The sides with a line of small pores between the axilla and groin.*

2. PLEURODELES.

Head rounded, rather depressed. *Tongue* small, nearly circular, adherent, edges slightly free. *Parotids* porous. *Eyelid* equal. — *Limbs* long. — *Toes* 4:5, free, clawless, elongate. — *Tail* long, thin, compressed at the base. — *Teeth* very small, acute, on the inner edge of the jaws. *Palatine teeth* in two distant longitudinal series, united by an arch in front, near the maxillary teeth, much in front of the line of the internal nostrils. — *Ribs* perfect, fourteen pair, pointed, perforating the skin. — *Orbit* with a peculiar bony arch above.

Pleurodeles Michahelles, Isis, 1830, 195.; *Tschudi, Batr.* 56. 91.; *Bonap. Fauna Ital.* ii. 113., *Amph. Eur.* 65.; *Fitz. S. R.* 33.

1. PLEURODELES WALT. L.

Brown spotted, with a series of white specks on each side; beneath pale yellowish, black-speckled. Tail rather longer than rest of the body.

Pleurodeles Waltl Michah. *Isis*, 1830, 195. t. 2.; *Bonap. Fauna Ital.* t. . f. 5.; *Tschudi, Batr.* 91. t. 2. f. 1., *Mém. Sci. Nat.* t. 5. f. 1.; *Fitz. S. R.* 33.

- a. In spirits. Tangier. Skin tubercular, with a black-brown horny wart in the centre of each tubercle. Back not crested. Tail compressed, with a continued fringe on edge. Grey-brown above, with a series of roundish white spots on each side; beneath whitish. Length $3\frac{1}{2}$ inches, tail $7\frac{1}{2}$ inches. The tail longer; gill in a very rudimentary condition. From Mr. Fraser's Collection.
- b. In spirits. Tangier. Tail shorter, the gill remaining in a contracted state on each side. From Mr. Fraser's Collection.
- c, d. In spirits. Young. S. Europe? Presented by P. B. Webb, Esq.

3. TRITON.

Head rounded, convex; crown rather flat. Tongue large, oval, papillary, sides free, pointed in front. Palatine teeth numerous, in two separate longitudinal series, rather diverging behind the front, and nearly on a line with the internal nostrils. Maxillary teeth rather large. Parotids porous, a group of pores on the lores, and a line of pores on each side between the legs.—*Skin* soft, granular.—*Tail* compressed, almost the length of the body.—*Toes* elongate, slender, free or lobed, or imperfectly palmated. Plantar warts distinct.—*Ribs* very short, slender. The lips of the old specimens become enlarged, dependent.

a. In spirits. N. Africa ?

b. In spirits. Young ? N. Africa ? Tail short, very acute, only as long as the body, with an even membranous fin on each edge. Back and tail brown-spotted.

2. TRITON CRISTATUS.

Blackish, black-spotted ; sides minutely white-dotted. Tail with a lanceolate bluish longitudinal band, rather below the middle ; lower edge yellow or orange. Belly yellow or red, with rows of black spots, the middle spot often confluent. Parotids porous. A series of pores on each side of the back, and along each side of the belly, continued over the under side of the limbs, forking in front, going over and under the eyes. The line over the eyes and in front of the orbit is formed of two or three series. Lips of adult dilated, enlarged.

Male in breeding season : dorsal and caudal crest toothed, and separated by a notch at the loins. Female and male in winter : crest none ; lower edge of tail orange. (*Penn. B. Z.* iii. t. 4. ; *Laur. Rept.* t. 2. f. 4.)

Young olive-brown, dorsal line yellow ; abdomen orange, black-spotted ; lower edge of tail orange-red.

a.? In spirits. Not good state. Back warty, grey, black-marbled. Sides white-dotted, with several series of small black spots; beneath yellow, spotless. Collar under throat black-spotted. Europe.

b. In spirits. Back blackish: side and sides of tail black-spotted; beneath, yellow spotless: lower lip with a

regular series of black spots. Hungary. Mr. Brandt's collection.

Var. 1. Skin very smooth, scarcely warty.

T. alpestris apuanus Bonap. *Fauna Ital.* t. . f. 3., *Amph. Eur.* 70.

Hab. Italy. Mus. Bonaparte.

5. ? *TRITON NYCHTHEMERUS* Michah., Bonap. *Fauna Ital.* t. . f. 5., *Tschudi, Batrac.* 95. "is perhaps the young of *T. marmorata* ? or *T. cristata*." Bonap. *Amph. Eur.*

6. *TRITON ERMANNI* Wieg., quoted by *Tschudi, Batrac.* 95., is unknown to me.

4. NOTOPHTHALMUS.

Head flat, crown ridged. Skin granular, rugose. Tongue small, oblong, attached, edges scarcely free. Palatine teeth in two series, rather wider apart behind. Internal nostrils large, oblong, transverse. Parotids none, poreless. — *Sides* with a series of pores. — *Toes* 4 : 5, free, depressed; soles warty. — *Tail* compressed. Lower sides of thighs of males ? with a callous plaited band.

A bony orbit above the eye, formed of the union of processes from the frontal and tympanic bones, enclosing a foramen through which pass the flexor muscles of the jaw, similar in this respect to *Cynops*, *Pleurodeles*, and *Euproctus*. The ossification extending to the hyoid apparatus, carpus, and tarsus. Vertebrae much compressed, with high crests. Three apertures in the skin of the cheeks behind the eye, not communicating with the cavity of the mouth. Hind feet much flattened; first and fifth hind toes nearly rudimentary. *Baird*, l. c. 281. 1849.

Dr. Holbrook describes this species as having a transverse series of palatine teeth, but they are not apparent in our specimens. The genus chiefly differs from *Triton* in the want of parotids.

Lissotriton palmipes var. *Bell, Brit. Rept.* 141. fig.

a—c. In spirits. *Lycia?* England? Presented by J. E. Gray, Esq. *a.* Specimen figured by Mr. Bell.

According to M. Guérin this species is found in *Lycia*. *Icon. Règ. Anim.* p. 17.

B. Tongue large, hinder half free. Toes 4 : 4.—*Seiranotina.*

11. SEIRANOTA.

Head angular. Eyes large. Nostrils lateral. Tongue large, oblong, cordate; side edges, and hinder half free. Palatine teeth numerous, in two series, close, diverging and forming an equal-sided triangle behind. Teeth very minute. Parotid none.—*Tail* roundish, elongate.—*Body* densely warty. Back and tail with a bony crest.—*Fingers* and *toes* four, short, thick.—*Ribs* well developed, scarcely movable.

FAM. II. MOLGIDÆ.

Head depressed.

Orbit not bony above.

Tongue large, adherent.

Palatine teeth in two converging series, each line being in the outer hinder edge of the elongated angular vomerine bones. *Sphenoid* toothless. t. 3. f. 14.

Ribs rudimentary or wanting.

Synopsis of Genera.

1. HYNوبيUS. Parotids none.

2. MOLGE. Parotids large, glandular.

1. HYNوبيUS.

Head depressed; crown convex. Muzzle rounded. *Tongue* very large, elongate, quite entire, adherent. *Palatine teeth* in two central series, arched in front to the inner nostrils. *Parotids* indistinct.—*Sides* plaited.—*Limbs* short, thick.—*Tail* short, ensiform, round at the base.

Hynوبيus Tschudi, *Batr.* 60. 94.; Bonap. *Faun. Ital.* ii. 131. n. 12.; Fitz. *S. R.* 34.

Salamandra (part.) Schlegel, *Faun. Jap.*

1. HYNوبيUS NEBULOSUS.

Pale brown, slightly clouded, rather paler beneath.

Hynوبيus nebulosus Tschudi, *Batr.* 94.

a—d. In spirits. Japan. From the Leyden Museum.

FAM. III. PLETHODONTIDÆ.

Palatine teeth forming an interrupted cross series in front of the palate, between the internal nostrils, each series running across the hinder end of the broad vomerine bones. The sphenoid with two more or less broad, sometimes confluent, series of teeth, which are rarely wanting. t. 3. f. 15. *Paratoid* indistinct.—*Skin* smooth, rarely granular, without any series of pores.

Dr. Holbrook's description of the palatine teeth in many instances, and sometimes of the tongue, does not agree with the specimens in the British Museum.

Dr. Baird's Revision of N. American Tailed Batrachia, in *Jour. Acad. N. S. Philad.* n. s. i. 281., Oct. 1849, appears more accurate.

Synopsis of Genera.

A. *Tongue* broad, adherent, only slightly free on the sides.
Sphenoid toothless.

a. *Toes and Fingers* clawed. *Hind Legs* dilated.

1. ONYCHODACTYLUS. Toes 4:5, free.

b. *Toes and Fingers not clawed.*

2. **HETEROTRITON.** "Toes 4:5, slightly webbed; outer toe fringed. Tongue large, circular; front slightly movable. Sphenoid (? Palatine) teeth in a transverse group."

3. **XIPHONURA.** Toes 4:5. Tongue circular. Tail much compressed.

4. **AMBYSTOMA.** Toes 4:5, free. Tongue oblong. Tail tapering rounded below, keeled above.

B. *Tongue broad, expanded, attached the whole length by a central line; sides and back edges free. Sphenoid toothed.*

5. **PLETHODON.** Toes 4:5, free. Hinder part of tongue shortly free.

C. *Tongue broad, expanded; front half attached by a central line, hinder half free, exsertile. Sphenoid toothed.*

6. **DESMOGNATHUS.** Toes 4:5.

7. **HEMIDACTYLUM.** Toes 4:4, free. Hinder part of tongue large, and great part free.

D. *Tongue peltate, subcircular, free all round, only attached by a cylindrical central pedicel from a sheath.*

8. **BATRACHOSEPS.** Toes 4:4, free. Body very long. Legs far apart.

9. **SPELERPES.** Toes 4:5, free. Body thick.

10. **GEOTRITON.** Toes 4:5, hinder ones webbed to the tip.

11. **ÆDIPUS.** Toes 4:5, very short, webbed to the end.

E. *Tongue peltate, very large, attached by a central cylindrical pedicel and by a slight process on the front edges.*

12. **ENSATINA.**

A. *Tongue broad, adherent, hinder side edges only free. Sphenoid toothless. Carpus and Tarsus ossified in the adult. — Ambystomina.*

a. *Toes and Fingers clawed. Hind Legs dilated.*1. **ONYCHODACTYLUS.**

Head broad, rounded; crown flat. Eyes large, prominent. Parotids none. Tongue large, ovate, acute. Palatine teeth in two

arched series ; sphenoid toothless. t. 3. f. 15. Collar and lateral plaits distinct.—*Feet* long, thick.—*Toes* 4 : 5, free, clawed. The hinder edge of outer hind foot dilated.—*Tail* elongate, roundish.

Onychodactylus Tschudi, *Batr.* 57. 92.; *Bonap. Faun. Ital.* ii. 331. n. 5.; *Fitz. S. R.* 33.

Dactylonyx Bibron, *MS.* fide *Bonap.*

b. *Toes and Fingers not clawed.*

2. HETEROTRITON.

“*Head* large, depressed. Muzzle full, rounded, flattened above. Nostrils anterior, superior. Eyes large. Mouth large. Tongue broad, circular, only slightly movable on its anterior and lateral margin. Palatine teeth in a small group, behind each internal nostril. Sphenoid teeth in a large transverse group, in the middle of the palate.—*Fore limbs* short, thick. Fingers four.—*Hinder limbs* much larger. Toes five. Outer hinder toe fringed on its outer edge.—*Tail* compressed.” *Holbrook.*

Triton sp. *Holbrook, N. A. Herp.* 85.

Salamandra sp. *Green, J. Acad. N. S. Phil.* vi. 254.

1. HETEROTRITON INGENS.

Bluish slate-coloured, with pale subovate spots. Belly slate-coloured.

Salamandra ingens Green, J. Acad. N. S. Phil. vi. 254.

Triton ingens Holbrook, N. Amer. Herp. v. 85. t. 29.

Hab. Western Waters of N. America, Tennessee, Louisiana.

3. XIPHONURA.

Head large, rounded; crown convex. *Palate* flat, broad. *Palatine* teeth in a continued transverse line, behind the internal nostrils. *Sphenoid* with a few scattered teeth. *Tongue* large, broad, attached, free on the edges.—*Feet* strong, large. *Toes* elongate, free; end callous.—*Skin* densely granular.—*Tail* much compressed, elongate, ensiform.

Dr. Holbrook incorrectly describes the "Tongue small, round, pedunculated, slightly attached in front. Palatine teeth minute, in a transverse row behind the nares. Sphenoid with two longitudinal series to the hinder part of the palate."

Ambystoma tigrina Baird, l. c. 284.

Hab. New Jersey, Massachusetts.

3. AMBYSTOMA ? TALPOIDEUM.

"Dusky, nearly black; beneath dusky, purplish. Head very large, flattened. Muzzle full, rounded. Mouth large. Tongue sub-rhomboidal, smaller and perfectly adherent behind, lateral and front edges free. Internal nostrils large. Palatine teeth minute, in a line, slightly arched backward in the middle, where the teeth are largest and more numerous. Sphenoid toothless. Eye small. Body short, thick, clumsy. Tail short, thick, compressed. Fore limbs short, thick, stout. Fingers four, short. Hinder limbs stouter. Toes five, slightly united at their base."

Salamandra talpoidea Holbrook, *N. A. Herp.* v. 73. t. 24.

Hab. South Carolina, on the sea islands. Terrestrial, burrowing under the ground like moles.

4. AMBYSTOMA OPACUM.

Head short, broad. Muzzle large, rounded. Body and tail pale ash, with irregular bluish-black cross bands. Throat and abdomen purplish blue. Tail as long as body, compressed.

5. AMBYSTOMA PUNCTULATUM.

Lead-coloured, smooth. Lower part of sides and beneath white. Cheek and upper part of sides with distant scattered white dots. Head depressed. Eyes large, prominent. Tail as long as the body, slender, rather tapering and compressed, rounded above and below.

a. In spirits. Monterey, California.

6. AMBYSTOMA MACRODACTYLUM.

Dark brown. Back with a broad (chestnut-brown) obscure stripe. Sides greyish-sprinkled; beneath dark brown, spotless. Toes long, not webbed. Tail roundish, not compressed. Skull longer than broad.

Ambystoma macrodactyla Baird, *J. A. N. S. Phil.* 1849, 292.

Hab. Oregon. Astoria. Mus. Acad. N. S. Philadelphia.

7. AMBYSTOMA MAVORTIUM.

Dull black or dark brown (in spirits), yellow-blotched above and below. Back with about 9, tail with 13, transverse yellowish bands. Body thick. Feet short; toes short, broad. Tail much compressed, longer than body and head. Skull broader than long.

Ambystoma mavortia Baird, *J. A. N. S. Philad.* 1849, 293.

Hab. New Mexico. (Dr. Weslizenus.)

8. AMBYSTOMA EPISCOPUS.

Yellowish, with dark mottlings and darker spots. Tail much compressed, shorter than the body. Skull longer than broad. Head wedge-shaped.

Ambystoma episcopus Baird, *J. A. N. S. Philad.* i. 292. 1849.

Hab. Mississippi, Kemper county. (C. Lloyd.)

§§ *Slender, brown.*—*Saurophis* Fitz.

9. AMBYSTOMA ERYTHRONOTUM.

Head short. Muzzle blunt. Body cylindrical, with a broad brown vertebral streak to end of tail; sides yellowish; abdomen white. Tail shorter than the body, tapering, pointed. Young reddish.

Salamandra erythronota Green, *Jour. A. N. S. Philad.* i. 356. 1818; *Harlan, M. and P. Res.* 95., *N. A. Rept.* 13.; *Holbrook, N. Amer. Herp.* v. 43. t. 11.

a—c. In spirits. N. America. Presented by Edward Doubleday, Esq.

d. In spirits. N. America.

e—g. In spirits. N. America. Presented by Thos. Bell, Esq.

10. AMBYSTOMA ? HALDEMANI.

Head flattened above. Muzzle rounded. Body and tail above pale yellow, with three irregular series of dusky spots and blotches. Sides rather dusky. Tongue broad, subrotund. Pedicel short. Palatine teeth minute, in a line, running rather backwards, not united. Sphenoid teeth minute, in a longitudinal group in centre of palate.

Salamandra Haldemani Holbrook, *N. A. Herp.* v. 59. t. 18.

Hab. Pennsylvania, Maryland, Virginia.

11. AMBYSTOMA ?? FRONTALE ?

Dirty ferruginous, beneath yellowish. Nose white. Tail shorter than the body, thick, tapering, and pointed. Length three inches.

Salamandra sinciput alba Green, *Jour. Acad. Philad.* 352. 1818; *Harlan, N. A. Rept.* 13.

S. frontalis Gray, *Griffith, A. K.* ix. 107.

Hab. New Jersey. (Green.)

B. Tongue broad, expanded, attached the whole of its length by a central line; the sides and hinder end free. Sphenoid toothed. Carpus and Tarsus not ossified.—*Plethodontina*.

5. PLETHODON.

Head broad, depressed. Parotids none. Tongue large, broad, expanded, attached nearly the whole of its length by a linear cen-

tral band ; sides and hinder end free. Palatine teeth in two short series, generally interrupted in the middle, and sometimes rather directed backwards. Sphenoid covered with teeth in several series ; group wide behind.—*Skin* smooth. Sides plaited.—*Tail* rounded.

Plethodon Tschudi, *Batr.* 58. 92. ; *Bonap. Fauna Ital.* ii. 131. n. 6. ; *Fitz. S. R.* 32. ; *Baird*, l. c. 292.

Desmognathus articulatus *Baird*, l. c. 286, 1849.

a—d. In spirits. New Orleans. Presented by Edward Doubleday, Esq.

7. HEMIDACTYLIUM.

Head small, rounded, truncated.—*Body* short, round.—*Tail* fusiform, compressed. Body and tail plaited on the sides.—*Skin* smooth.—*Sphenoid teeth* in many series.—*Tongue* very long, acute in front, broad behind; front half adherent by a central linear band, sides and under part free.—*Feet* slender.—*Toes* 4:4; short, webbed at the base. Costal furrows deep, extending to dorsal line

Hemidactylum Tschudi, Batr. 59. 94. 1838.; *Bonap. Fauna Ital.* ii. 131. n. 10.; *Fitz. S. R.* 33.; *Baird*, l. c. 284. 1849

1. HEMIDACTYLIUM SCUTATUM.

Pale brown, beneath yellowish, black-spotted.

Hemidactylum scutatum *Tschudi, Batr.* 94.; *Bonap. Fauna Ital.* ii. 131.

Salamandra scutata *Schlegel, Mus. Leyd. Abbild.* t. 40. f. 4. 6., *Fauna Japonica*, ii. 119.

Salamandra melanosticta Gibbes, *Boston Jour. N. H.* v. 89. t. 10.

a. In spirits. N. America, Niagara. Back with three indistinct series of black specks. Sides dark, clouded.

D. *Tongue peltate; top subcircular, dilated; free all round, only attached by a central subcylindrical pedicel, which is surrounded by a sheath. "Tongue entirely protractile, capable of considerable protrusion, and supported on the top of the constricted hyoid apparatus. Sphenoidal teeth on two plates, not in contact, diverging behind."* Baird.—*Cædipina*.

8. BATRACHOSEPS.

Head very short. *Eyes* prominent.—*Skin* smooth.—*Body* and *tail* elongate, slender, roundish, plaited on the sides.—*Limbs* slender, far apart.—*Toes* 4:4, short, slender, free.—*Tongue* peltate.—*Palatine teeth* very small, in a small transverse arched series.

Batrachoseps Bonap. Fauna Ital. ii. 131. n. 9. 1841; *Fitz. S. Rept.* 33.; *Baird, Jour. Acad. N. S. P.* 1849, 283. 287.

Salamandrina Eschsch. Zool. Atlas, 21. (not Savi.)

1. BATRACHOSEPS ATTENUATUS.

Blackish brown. Back and upper part redder, with a black dorsal line and diagonal cross lines. Body and tail elongate, slender, round. Feet very small, thin. Toes 4:4, subequal, free.

Salamandrina attenuata Esch. Zool. Atlas, t. 21. f. 1—14.

Batrachoseps attenuatus Bonap. Fauna Ital. ii. 131. 1841; *Fitz. S. R.* 33.

B. attenuata Baird, l. c. 288.

OSTEOL. Esch. Zool. Atlas, t. 21. f. 5, 6.

a—c. In spirits. Young and adult. St. Francisco, California.

2. BATRACHOSEPS QUADRIDIGITATUS.

Pale straw colour, beneath bluish and silvery, vertebral and lateral line brown dotted. Body long, slender. Tail very long.

Salamandra quadridigitata Holbrook, N. Amer. Herp. v. 65. t. 21.

Batr. quadridigitata Baird, J. A. N. S. Phil. 1849, 287.

Hab. Georgia, Florida, S. Carolina.

9. SPELERPES.

Head moderate. *Eyes* moderate, pupil oblong, horizontal. *Parotids* none. *Tongue* large, peltate, free all round, on a cylindrical central pedicel. *Palatine teeth* in a transverse series, between the internal nostrils. *Sphenoidal teeth* in two or more longitudinal series.—*Body* subcylindrical, plaited on the sides.—*Toes* 4 : 5, free.—*Tail* subcylindrical, tapering, keeled above and rounder beneath.

Plethodon (Saurocercus) longicauda Fitz. S. R. 34.

a. In spirits. Half-grown; middle of back and upper part of

tail nearly spotless. N. America. Presented by Jacob Green, M.D.

Salamandra longicauda Holbrook, *N. A. Herp.* t. 19.

- b.* In spirits. Adult ; back, sides, and upper part of tail with large black irregular spots ; upper lips with two cirri. N. America.
- c, d.* In spirits. Half-grown ; like *b*, but with an indistinct spotless band on each side of the back. N. America. Presented by Edward Doubleday, Esq.
- e.* In spirits. Yellow ; back with four irregular series of black spots, spots of the vertebral series smaller and closer together. N. America, Ohio. From Leyden Museum.
- f.* In spirits. Half-grown ; back and upper part of tail slightly spotted ; spots on side and sides of tail crowded, sub-confluent. N. America, Ohio. From Leyden Museum.
- g, h.* Young (var.?). Belly black-spotted. N. America.

2. SPELERPES CIRRIGERA.

“Head short ; muzzle rounded. Upper jaw 2-bearded between nostrils and lips. Body above pale yellow, mottled with black dots, with a dusky lateral line. Tail compressed ; longer than the body. Tongue elongated, oval, thin, very mobile. Palatine teeth transverse, from inner edge of internal nares. Sphenoid teeth very minute, in a broad longitudinal streak to hinder end of palate.”

Salamandra cirrigera Green, *J. Acad. N. S. Philad.* iv. 251. 1831 ;
Harlan, M. and P. Res. 97. ; *Holbrook, N. A. Herp.* v. 53. t. 15.
Spelerpes cirrigera Baird, *Jour. A. N. S. Phil.* 1849, 287.

Hab. Louisiana and Mississippi. Probably only a variety of the preceding, which often has two beards on the upper lip.

3. SPELERPES BILINEATA.

“Head small. Body cylindrical. Tail longer than the body, tip slightly compressed. Above brownish yellow, sides with a black line, belly yellow. Tongue small, suboval, thin, pediceled, very movable. Palatine teeth in a cross line from inner edge of nostrils. Sphenoid teeth in two longitudinal lines to back of palate.”

Hab. N. America, Vermont.

Probably *S. porphyritica* Green, *Cont. Macl. Lyc.* i. t. 1. f. 2.

8. SPELERPES ? PORPHYRITICA.

“Head moderate. Muzzle blunt. Body elongated. Tail as long as body, compressed, and slightly keeled on the upper and hinder half of lower edge. Above dark brown, with irregular white spots. Tongue broad, elongated, thin, attached posteriorly, less so anteriorly, and most movable on the sides. Palatine teeth in a continued transverse line. Sphenoid toothless. Nostrils lateral, superior, with a slight ridge from them to the orbit.”

Salamandra porphyritica Green, *Maclurian Lyceum*, i. 3. t. i. f. 2.; *Harlan, Med. and Ph. Rep.* 98.

Triton porphyriticus Holbrook, *N. Amer. Herp.* v. 83. t. 28.

Hab. Pennsylvania, French Creek. (Green.)

9. SPELERPES BELLII.

Blackish back, with two series of oblong yellow spots, front ones confluent. Nape with a broad triangular yellow mark, with a

large oblong yellow spot on each side. Toes short. Palatine teeth ———.

a. In spirits. Tail reproduced, ? brown, tapering, rounded above and below. Mexico. Presented by T. Bell, Esq.

10. GEOTRITON.

Head rounded. Muzzle high, truncated. Eyes large, prominent. Parotids none. Tongue large, circular, peltate, only affixed in the middle, very mobile. Teeth very minute; palatine placed in four series, two anterior and two posterior.—*Body* rounded. Sides plaited. Skin smooth, thin, soft. Ribs none.—*Limbs* slender, thin, long.—*Toes* 4: 5, short, thick, all united by a web.—*Soles of feet* without warts.—*Tail* roundish, attenuated.

Geotriton Bonap. Faun. Ital. t. 31. n. 14., *Amph. Eur.* 67.; *Tschudi, Batr.* 59. 93. 1838; *Fitz. S. R.* 33.

Salamandra sp. *Gesner, Schlegel, Cuvier.*

1. GEOTRITON FUSCUS.

Brown, with obscure reddish marks, beneath ash with very minute white dots. Muzzle obliquely truncated below. Nostrils lateral. Eyes prominent. Tail rather shorter than the body.

OSTEOL. *Cuvier in Humboldt, Obs. Zool.* t. 14. f. 10—16. (skeleton).

a—c. In spirits. Mexico. Mr. Brandt's collection.

The skull, t. 3. f. 12., copied from *Cuvier, Oss. Foss.* t. 27. f. 25., differs very little from that of the young *Triton marmoratus*, which had not gained its second pair of legs, figured t. 2. f. 10. from *Dugès*, t. 14. f. 89.

“It (*Siredon*) so much resembles the larva of *Ambystoma punctata*, in both external form and internal structure, that I cannot but believe it to be the larva of some gigantic species of this genus. It differs from all known *Perennibranchiates* in possessing the larval character of the gular or opercular flap, this being unattached to the subjacent integuments, and free to the extremity of the chin. The nondiscovery of the adult is no argument against

its existence. I had caught hundreds of the very remarkable larva of *Pseudotriton salmoneus* near Carlisle, before I found an adult. Until then I knew no where to refer the animal, supposing this species to exist no nearer than the mountains of New York and Vermont." — *Baird, Jour. A. N. S. Phil.* 1849, 292.

b. Skeleton of a. Japan. From Leyden Museum.

2. PROTONOPSIS.

Head large, ovate, trigonate, flat. Muzzle produced. Mouth large. Jaws with a series of minute teeth. Palatine teeth small, concentric with the maxillary on front edge of the vomerine bones. Nostrils marginal, close together, square. Tongue very indistinct.—*Neck* with a single slit on each side.—*Body* depressed, granose.—*Tail* compressed.—*Feet* short, outer edge fringed. Toes 4 : 5, short, webbed, clawless; outer toe of the hind foot fringed.—The palatine teeth have been taken for a second series of maxillary. t. 4. f. 18.

Protonopsis (part.) Barton on *Siren lacertina*, 28.

b. In spirits. Adult. N. America.

2. PROTONOPSIS FUSCA.

Head large, flat. Muzzle full and rounded. Body uniform, pale brown, beneath paler.

Menopoma fusca *Holbrook, H. Amer. Herp.* v. 99. t. 33.; *Baird*, l. c. 290.

Hab. N. Carolina and Georgia. Probably only a variety of the former.

FAM. II. AMPHIUMIDÆ.

Head oblong, nearly four-sided. Muzzle truncated. Lips thick, external. Gape small. Jaws with a series of small golden-coloured teeth. Palate with two subcentral, longitudinal, rather diverging series of teeth, nearly parallel to the maxillary teeth. (See t. 4. f. 21., from *Owen, Odont.* t. 62. f. 7.) Tongue indistinct.

Internal nostrils surrounded by bone on the sides of the palate.

Neck with a foramen on each side.

Body eel-shaped.

Feet four, short, slender, jointless, of little use for walking.

Toes rudimentary.

Ribs very rudimentary.

Living in water, burrowing in the mud in swamps near streams.

Hibernates.

ORDER III. PSEUDOPHIDIA.

Body elongate, subcylindrical. Limbs none.

Skin smooth, wrinkled, with minute embedded scales. *part. only*

Tail extremely short.

Vent open at the extremity of the body. *or missing in some genera*

Gill opening on the side of the neck, closed in the adults. *in some genera*

Bones of skull united into a solid mass. *no*

Internal nostrils on the hinder part of the palate, surrounded by bone.

Jaws with a series of teeth.

Palate with an arched series of teeth in the centre, parallel to the maxillary one, and before the internal nostrils. See *Dugès*, *Batr.* t. 14. f. 93. 95. copied t. 4. f. 19.

FAM. I. CÆCILIIDÆ.

Character and Synonyma of Order.

*Synopsis of Genera.*A. *Muzzle pitted.*

1. CÆCILIA. The pit under each nostril.
2. SIPHONOPS. The pit before each eye. Body with broad rings.
3. ICHTHYOPHIS. The pit before each eye. Body with narrow rings.

B. *Muzzle not pitted.*

4. RHINATREMA.

A. *Muzzle with Pits on each side.*

1. CÆCILIA.

Head cylindrical. *Muzzle* prominent. *Maxillary* and *palatine* teeth short, strong, conical. *Tongue* velvety, with two hemispheres corresponding to the inner holes of the nostrils. *Eyes* seen through the skin, or indistinct. A small pit or false nostril below each nostril.

Cæcilia *Tschudi*, *Batr.* 26. 55. 90.; *Fitz. S. R.* 34.; *Dum. et Bib. Erp. Gen.* viii. 274.

Obs. Cæcilia *nasuta Herm.* is a fish (*Sphagebranchus*).

1. CÆCILIA GRACILIS.

Body very long and slender, smooth, except near the cylindrical hinder extremity, where there are 15 close circular plaits. Tail rounded, depressed, rounder above. Muzzle broad, rounded.

Cæcilia *gracilis Shaw*, *Zool.* iii. 597. 1802; *Hempr. Berl. Mag.* 1824, 294.

C. *lumbricoidea Daud. Rept.* vii. 410. t. 92. f. 2. 1802; *Dum. et Bib. H. G.* viii. 275.

C. *lumbricoides Merrem, Tent.* 168.; *Cuv. R. A.* ii. 100.; *Gray in Griff. A. K.* ix. 284.

C. *vermiformis Shaw, MS. B. M.*

OSTEOL. *Dugès*, *Batr.* t. 14. f. 92—95.

- a. In spirits. Wants head, discoloured. Specimen named by G. Shaw, M.D.

Cæcilia gracilis *Shaw*.

- b. In spirits. Black.

- c. In spirits. Black, wants head. Demerara. Presented by J. Hadfield, Esq.

- d. In spirits. Bleached. Shorter.

C. vermiformis *G. Shaw, MS. Brit. Mus.*

- e. In spirits. Without head (var.). Thicker, rings wider apart. S. America.

2. CÆCILIA TENTACULATA.

Body cylindrical, rather thick, elongate, with 150 sometimes incomplete rings. Muzzle broad, rounded. Tail rounded.

Cæcilia albiventris *Daud. Rept.* vii. 422. t. 92. f. 2. 1802; *Cuv. R. A.* ii. 100.; *Gray, Griffith's A. K.* ix. 283.; *Dum. et Bib. H. G.* viii. 277.

C. tentaculata *Shaw, Zool.* iii. t. 136, 1802.

- a. In spirits. Specimen named by Dr. G. Shaw in Brit. Mus.

Cæcilia tentaculata *Shaw*.

3. CÆCILIA COMPRESSICAUDA.

Body elongate, rather thick. Back smooth, with ring-like folds beneath. Muzzle broad, rounded. End of the body compressed, angular above. Cloaca quite terminal.

Cæcilia compressicauda *Dum. & Bib. E. Gen.* viii. 278.

Hab. Cayenne.

4. CÆCILIA ROSTRATA.

Body short, rather thick, cylindrical, with 25 circular plaits. Muzzle narrow, obtusely pointed. Tail rounded.

Cæcilia rostrata *Cuv. R. A.* ii. 100.; *Gray, Griff. A. K.* ix. 284.; *Dum. et Bib. Erp. Gen.* viii. 279.

Hab. S. America.

5. CÆCILIA OXYURA.

Body short, moderately thick, cylindrical, with 180 plaits, the 30 last only surrounding the body. Muzzle rather narrowed. Tail pointed.

Cæcilia oxyura *Dum. & Bib. E. Gen.* viii. 280.

Hab. Malabar. Museum, Paris.

6. CÆCILIA SQUALOSTOMA.

Body cylindrical, deep olive, with confluent yellow spots, with 140 or 144 rings, the 12 hinder not completely surrounding the body. Muzzle prominent, with a slight protuberance rather below and behind the nostril. Eyes not distinct.

Cæcilia squalostoma *Stutchbury, Linn. Trans.* xvii. 362.

Hab. Africa, Gambia. Mus. Bristol Institution.

2. SIPHONOPS.

Head and body cylindrical, with broad rings. Muzzle short. Maxillary and palatine teeth strong, pointed, slightly curved. Tongue broad, entire, with vermiform pits. Eyes seen through the skin. A pit or false nostril on the lip, in the middle between the nostrils and the eye.

ANAT. Duvernoy, Règne Anim. Croch. t. 36., *Rev. Zool.* 1849, 186.

Siphonops *Wagler, Syst.* 198. (1828); *Tschudi, Batr.* 55. 90.; *Fitz. S. R.* 34.; *Dum. et Bib. Erp. Gen.* viii. 282.

Cæcilia sp. *Mikan, Cuvier.*

1. SIPHONOPS INTERRUPTA.

Body with 86 or 90 equally distanced, nearly regular rings. Muzzle broad, rounded. Tail rounded.

Siphonops annulatus *Wagler, Syst.* 198.; *Dum. et Bib. Erp. Gen.* viii. 282.

Cæcilia annulata *Mikan, Delect. Braz.* t. 11.; *Spix, Braz.* t. 26. f. 1.

C. interrupta *Cuv. R. A.* ii. 100.

a. In spirits. Brazils. Presented by Lord Stuart.

b. In spirits. Brazils. From the Leyden Museum.

2. SIPHONOPS MEXICANA.

Rings on the front half of the body regular, equidistant; of the hinder half twice as close as the upper ones, only encircling the dorsal half of the body. Muzzle slightly narrowed. Tail rounded. Back slate-coloured, beneath white; vent with a white ring.

Siphonops mexicanus *Dum. & Bib. Erp. Gen.* viii. 284.

Amphisbæna versatilis *Johnston, MS. B. M.* 1820.

a, b. In spirits. Mexico. Presented by Captain Sir Edw. Belcher, K.C.B., R.N.

c. In spirits. Mexico. Presented by C. Johnston, Esq.
Amphisbæna versatilis *Johnston, MS.*

3. ICHTHYOPHIS.

Head depressed, elongate. Muzzle obtuse. Maxillary and palatine teeth slender, acute, hooked. Tongue entire, velvet-like. Eyes distinct. A pit (or tentacle) below the eye, near the edge of the upper lip.—*Body* rather fusiform, with numerous crowded circular folds.

Ichthyophis *Fitz. N. Class.* 63.

Epicrium *Hasselt, Isis*, 1827; *Wagler, Syst.* 198.; *Tschudi, Batr.* 55. 90.; *Fitz. S. R.* 34.

Cæcilia sp. *Linn.*; *Van Hasselt, Isis.* 1827, 565.; *Gray, Ann. Phil.* 1825.

1. ICHTHYOPHIS GLUTINOSUS.

Body with 325 ring-like plaits; brown, with a white streak on each side. Tail conical.

Ichthyophis *Hasselti* *Fitz. Verz.* 63.

Epic. Hasselti *Wagler, Isis*, 1828, 743.

Epicrium glutinosum *Dum. & Bib. Erp. Gen.* viii. 286.

Cæcilia glutinosa *Linn. S. N. i.* 393.; *Seba*, ii. t. 25. f. 2.; *Gray*, in *Griff. A. K.* ix. 248.

C. viscosa *Latr. Rept.* iv. 238.

C. hypocyanea *Hasselt, Isis*, 1827, 365.; *Schlegel, Abbild.* t. 39. f. 1. jun.

a. In spirits. Ceylon. Presented by Sir Joseph Banks, Bart. P.R.S.

B. *Muzzle not pitted.*

4. RHINATREMA

Head depressed, elongate. Muzzle blunt, without any pits. Teeth, maxillary and palatine, slender, acute, bent backwards. Tongue entire, velvety. Eyes distinct.—*Body* rather fusiform, with numerous circular plaits. Black, with a yellow band on each side.

Rhinatrema *Dum. & Bib.* viii. 288.; *Fitz. S. R.* 34.

Cæcilia sp. *Cuvier, R. A.* ii. 100.

1. RHINATREMA BIVITTATUM.

Rhinatrema bivittatum Dum. & Bib. *H. G.* viii. 288.

Cæcilia bivittata Cuv. *R. A.* ii. 100.; *Guérin, Icon.* t. 25. f. 2.

Gray in *Griff. A. K.* ix. 284.

Hab. Cayenne. Mus. Paris.

B. SIRENES. — *Nostrils not enclosed in a bony case; the internal one in front, between the lips and the bones of the palate. Maxillary bones none, or rudimentary. Palate and lower jaw toothed.*

Cuvier (*Oss. Fos.* v. 240.) observes that the internal nostril is the character which best separates these animals from fish. See also Owen (*Linn. Trans.* xviii. 327.).

ORDER IV. PSEUDOICHTHYAS.

Body elongate, fish-like; covered with imbricated oval scales; and with dorsal and caudal membranes resembling fins, strengthened with soft jointed rays.

Legs four, rudimentary, elongated, subulate.

Gill external, under side tufted; internal, on the edge of some of the septa between the gill openings. *Melville.*

External nostrils not enclosed in a bony case; the internal ones between the lips and the bones of the palate.

Maxillæ none. *Intermaxillæ* very small, with one or two teeth.

Palatine teeth very large. Lower jaw with large teeth. t. 4. f. 20.

Heart with two auricles.

Lungs equal.

Trachea, on ventral face of digestive tube.

Ichthyoida (part.) Latr. *Fam. Nat.* 1825.

Proteidæ Hogg, *Ann. N. Hist.* 1839.

Hypochthonina Bonap. *Amph. Eur.*

Synopsis of Genera.

1. *PROTEUS*. Head long, truncated in front. Toes 3 : 4. Tail short, compressed. Maxillary bone incomplete, toothless.
2. *NECTURUS*. Head broad, depressed. Toes 4 : 4. Tail compressed. Maxillary bone complete, toothed.

1. PROTEUS.

Head oblong, truncated. *Eyes* very small. *Maxillary teeth* none. *Palatine teeth* in two long series. t. 4. f. 16. *Tongue* not to be distinguished. — *Gills* large, 3 : 3. on each side, fringed. — *Feet* four. — *Toes* 3 : 4. — *Tail* short, compressed. — *Body* elongate, cylindrical. — *Skin* smooth.

c. In spirits. Adult. N. America. Presented by John Edw.
Gray, Esq.

2. NECTURUS LATERALIS.

Head large, flattened above. Muzzle truncated. Body elongate,
dusky brown, with a dark streak from nostril through the eye,
and along each side to the tail.

Triton lateralis Say, Long's Exped. Rocky Mount. i. 300., 5. 103.

Menobranchnus lateralis Harlan, Med. and Phys. Res. 89.; *Hol-
brook, N. A. Herp.* v. 115. t. 28.

Hab. Mississippi.

3. NECTURUS n. s. *Gibbes*, fide *Baird, J. A. N. Phil.* 1849, not
described.

Hab. Santee River, S. Carolina.

FAM. II. SIRENIDÆ.

Limbs two, anterior, small.

Body subcylindrical, rather compressed behind.

Operculum none.

Teeth in each jaw.

Palate with numerous cross series of teeth on the vomerine bones.
t. 4. f. 17.

Living in moist clay, rarely in water, but can swim well.

Sirenina Gray, *Ann. Phil.* 1825, 216.

Sirenidae Bonap. *Amph. Eur.* 32.; Hogg, *Ann. N. H.* 1839.

Synopsis of Genera.

1. SIREN. Fingers four. Gills ciliated.
2. PSEUDOBANCHUS. Fingers three. Gills not ciliated.

1. SIREN.

Head oblong, subquadrate, short. Mouth small. Eyes very small. Maxillary and intermaxillary teeth none. Palatine teeth numerous on the front of outer side, in many oblique cross series on the vomerine bone (t. 4. f. 17.). Tongue small, arrow-shaped, rather rounded in front, only free at the tips and front of sides. — *Gills* three on each side, small; spiracles three on each side under the gills. — *Feet* two, anterior, small. — *Fingers* four. — *Body* cylindrical, elongate. — *Skin* smooth.

 squalostomus, Cœc. 59.
 Stelio, 35.; Sal. 25.
 striata, Molge, 31. 33.;
 Siren, 69.
 striatus, Pseudob. 69.
 subcristata, Sal. 25.
 subcristatus, Cynops, 25.
 subfusca, Sal. 45.
 subfuscus, Mycetog. 45.;
 Pseudot. 45.; Triton, 45.
 subviolacea, Amb. 36.; Lac.
 35.; Sal. 35.
 subviolaceum, Amb. 35.
 Subichthiens, 64.
 symmetrica, Sal. 23.; Trist.
 23.

T.

tæniata mas, Lac. 27.; Sal.
 27.
 talpoidea, Sal. 36.
 talpoideum, Amb. 36.
 Taricha, 15. 25.
 tentaculata, Cœc. 58.
 ter-digitata, Sal. 29.
 tereticauda, Triton, 49.
 terrestres, Sal. 17.
 tetradactylus, Menob. 66.;
 Prot. 66.

tetrapoda, Amph. 63.; Ba-
 trach. 13. 51.
 Thunbergii, Lac. 33.
 tigrina, Amb. 36.; Sal. 36.;
 Triton, 36.
 tigrinum, Amb. 35.
 torosa, Taricha, 25.
 torosus, Not. 25.; Triton, 25.
 Tremadotera, B. U. 51. 64.
 tridactyla, Murænop. 55.;
 Sal. 29.
 tridactylum, Amph. 55.
 tridactylus, Molge. 30.
 Triton, 15. 18.; Lac. 21.
 27.
 Tritones, 10. 11. 14.
 Tritonia, 14.
 tritonius, Proteus, 21. 27.
 Triturus, 18. 22.

U.

Urodela, Amph. 13.; Batr.
 Cad. 13.
 Urodeles, Batrac. 13.
 Urodeli, 13.
 Urodelia, 13.
 urophora, Amph. 51.
 unguiculata, Sal. 33.
 urophora, Batrac. 13.

V.

variegata, Sal. 48.
 variegatus, Cœdip. 48.
 variolata, Sal. 34. 39.
 venenosa, Sal. 35.
 ventricosus, Brad. 26.
 vermiformis, Cœc. 57.
 versatilis, Amphisb. 60.
 viridescens, Not. 23.; Tri-
 tur. 23.
 viscosa, Cœc. 60.
 vittatus, Molge, 29.; Omm.
 29.; Triton, 29.
 vulgaris, Lac. 27.; Sal. 17.

W.

Waltl, Pleurod. 17.
 Wurfbauii, Molge, 21.;
 Sal. 21.; Triton, 21.

X.

xanthostictus, Prot. 65.
 Xiphonura, 32. 34.
 Xiphosura, 48.

Z.

Zoysii, Prot. 65.

THE END.
